Bootstrap

Bootstrap module allows to generate the Bootstrap components and their default behavior from Phalcon controllers, then display in views.

-- Prerequisites

-- Service injection

It is necessary to inject the JQuery service at application startup, and instantiate Bootstrap:

```
$di->set("jquery",function(){
    $jquery= new JsUtils(array("driver"=>"Jquery"));
    $jquery->bootstrap(new Bootstrap());//for Twitter Bootstrap
    return $jquery;
});
```

-- js and css files inclusion
