

Phalcon-JQuery

-- Installation

1. Download Phalcon-JQuery on [github](#)
2. Unzip the archive in a local folder and copy the Ajax folder and his content in the folder libraries defined in your Phalcon configuration file :

The image shows a screenshot of a file explorer on the left and a code editor on the right. The file explorer shows a directory structure for an application:

- app
 - controllers
 - views
 - library
 - Ajax
 - bootstrap
 - common
 - lib
 - service
 - ui
 - Bootstrap.php
 - Jquery.php
 - JqueryUI.php
 - jsUtils.php

The code editor on the right shows a configuration file with the following content:

```
'application' => array(
    'controllersDir' => __DIR__ .
    '/../..../app/controllers/',
    'modelsDir' => __DIR__ .
    '/../..../app/models/',
    'viewsDir' => __DIR__ .
    '/../..../app/views/',
    'pluginsDir' => __DIR__ .
    '/../..../app/plugins/',
    'libraryDir' => __DIR__ .
    '/../..../app/library/',
    'cacheDir' => __DIR__ .
    '/../..../app/cache/',
    'baseUri' => '/atp/',
)
</config>
```

-- Configuration

-- Service injection

For adding Phalcon-JQuery to a Phalcon project, it is necessary to inject the JQuery service at application startup

:

```
$di->set("jquery",function(){  
    $jquery= new JsUtils(array("driver"=>"Jquery"));  
    $jquery->ui(new JQueryUI());//optional for JQuery UI  
    $jquery->bootstrap(new Bootstrap());//Optional for Twitter Bootstrap  
    return $jquery;  
});
```

-- JS libraries integration
