Méthodes

render

```
render (name, options)
```

Affiche le contenu d'un template dans une zone outlet nommée, en passant éventuellement des paramètres (model, controller...)

```
// ...

Router.map(function() {
  this.route('photos');
});

export default Router;
```

```
<!-- application.hbs -->
<div class='something-in-the-app-hbs'>
  {{outlet "anOutletName"}}
</div>
```

```
import Ember from 'ember';

export default Ember.Route.extend({
  renderTemplate() {
    this.render('photos', {
      into: 'application',
      outlet: 'anOutletName'
    })
  }
});
```
